1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2, 4-7, 12-13, 16-17, 21-22, and 24-25 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Greer.
3. Claims 1-3, 8-15, 18-20, and 24-27 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Beesley et al.
4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3, 8-11, 14-15, 18-20, 23, and 26-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Greer in view of Beesley et al.

Greer discloses all of the claimed subject matter except for having a pivotally mounted upper jaw with a spring, a ratcheting mechanism/incremental teeth on the slide for engagement with the brake, and gripping surfaces on the jaws. Beesley et al discloses a pivotally mounted upper jaw with a spring, a ratcheting mechanism/incremental teeth on the slide for engagement with the brake, and gripping surfaces on the jaws. It would have been obvious to one having ordinary skill in the art to form the device of Greer with a pivotally mounted upper jaw with a spring, a ratcheting mechanism/incremental teeth on the slide for engagement with the brake,

and gripping surfaces on the jaws to allow the jaws to be adjusted and to grip a workpiece as taught by Beesley et al.
